Professional Skills

- **Networking:** TCP/IP, WAN/LAN Protocols, Network Design, Subnetting
- **Operating Systems:** Linux (Distros: Arch, Ubuntu, CentOS, Debian/Kali, Fedora) Windows XP/10/11 (WSL/Active Directory) MacOs (OpenSense)
- **Logging:** ELK Stack
- **Tunneling:** Openvpn
- **Virtualization:** Docker, KVM, Qemu, cGroups, Virtual Box
- **Server Administration** init programs, Cron, User Permissions, SSH, Rsync
- **Languages/Scripting:** Golang, Bash, YAML, C, Lua, Rust, Javascript
- **Containerization:** Docker, Kubernetes (EKS)
- **Observability:** Datadog, Prometheus, Grafana
- **Version Control:** GitHub , CircleCi, GitLab, Bitbucket
- **Cloud Environments:** AWS, gcloud
- **Configuration Management:** Ansible
- **Automation:** Terraform, Gitlab.ci
- **Notification Systems:** PagerDuty, Slack
- **Queue Management:** Rabbitmq
- Project Management
- Communication Skills

Chris Montgomery

PERSONAL PROFILE

Highly skilled and adaptable engineer with a strong background encompassing DevOps, Site Reliability Engineering (SRE), Infrastructure, Platform, Software, and Network engineering. Adept at seamlessly integrating development and operations processes to drive efficiency, reliability, and scalability of systems. Proficient in implementing cutting-edge technologies, automating workflows, and optimizing end-to-end software delivery pipelines. With a keen eye for detail and a commitment to delivering robust solutions, I excel in collaborating cross-functionally to ensure seamless deployment, monitoring, and maintenance of complex applications.

STRENGTHS & CAPABILITIES

- Proficiency in creating and maintaining automated systems for deployment, monitoring, scaling, and recovery.
- Expertise in using monitoring tools and practices to ensure system reliability and performance.
- Incident Management: Ability to respond to and mitigate incidents, perform post-incident analysis, and implement preventive measures.
- Proficiency in configuring, managing, and maintaining servers, operating systems, and related infrastructure components.
- Networking: Understanding of networking protocols, security, and configurations to ensure smooth communication between systems.
- Understanding of security best practices, firewalls, encryption, and vulnerability assessment.
- Expertise in creating and maintaining platforms that enable developers to build, deploy, and run applications.
- Strong proficiency in programming languages relevant to software development.
- Understanding of different phases of SDLC, including design, development, testing, deployment, and maintenance.
- Proficiency in networking protocols such as TCP/IP, DNS, DHCP, HTTP/HTTPS, etc.
- Understanding of network security practices, including firewalls, intrusion detection/prevention, VPNs, and access controls.

PROFESSIONAL EXPERIENCE

DevOps Engineer II | St. Louis | Dec 21'- Aug 23'
Cloud Engineering

- Proficient in Kubernetes Administration, transitioning from unmanaged to managed nodes, utilizing EKS for 100+ services.
 - Managed Kubernetes environments (production, staging, and services).
 - Implemented package management through Helm and managed Helm Charts.
 - Ensured logging and troubleshooting capabilities.
 - Executed scaling strategies, including event-driven scaling and queue-based approaches.
 - Developed operators for efficient system management.
 - Crafted scripts for Core-api token management.
- Competent in AWS Administration with Terraform:
 - Managed IAM, including access, keys, passwords, and policies.
 - Oversaw ACM and certificate management.
 - Orchestrated EC2 and RDS management through scripted solutions.
 - Handled REDSHIFT and layer 4 and 7 load balancing.
- Proficient in Datadog Administration:
 - Integrated Datadog with various systems.
 - Created and managed dashboards and monitors.
 - Utilized APM, tracing, and synthetic tests for comprehensive observability.
- Ensured maintenance by updating Git Runners and standardizing CI files for consistent deployments across developer teams.
- Managed Infrastructure as Code (IaC) with a focus on Terraform:
 - Provisioned and managed clusters in Kubernetes (k8s).
 - Orchestrated k8s manifests through Helm.
- Expertise in Database Engineering:
 - Managed AWS RDS (MySQL) for relational databases.
 - Administered PostgreSQL for vector databases hosted in the cloud.
 - Oversaw AWS Redshift for database warehousing, including optimizing table creation.
- Conducted synthetic tests to ensure endpoint connectivity and performance; utilized APM tools for performance management.
- Engaged in research, exploring Datadog implementation and automation strategies for certificates, JWT, and VPCs.
- Proficient in networking, including implementing Service Mesh and layer 4 & 7 load balancing using AWS NLB and ALB.

System Engineering

- RabbitMQ Monitoring:
 - Monitored queue metrics (length, consumers, messages)
 - Scaled replicas manually as needed before event-driven solution
 - Ensured optimal performance and resource allocation
- Gitlab Administration:
 - Managed GitLab server using Ansible
 - Regularly updated and backed up server for data integrity
- OpenVPN Administration:
 - Managed OpenVPN setup with Terraform
 - Troubleshoot and resolved connection issues promptly
 - Established LDAP linking for streamlined user management

Operations

- Jira Administration:
 - Created new issue types to match project needs
 - Modified existing issues for accuracy and relevance
 - Integrated Datadog for improved monitoring capabilities
 - Altered workflows to enhance process efficiency
 - Processed user access requests to ensure appropriate permissions

Projects (Epics)

- Completed Datadog integration, transitioning from Grafana and Prometheus.
- Successfully removed Nginx sidecar for internal traffic.
- Remediated LastPass security breach:
 - Developed scripts to manage shared folder creation and access.
- Standardized Helm charts:
 - Transitioned from individual service manifests to a unified chart with exceptions.
- Revamped Docker base images from managed packages to compiled sources:
 - Rebuilt base Python images, eliminating reliance on deadsnakes:ppa.
 - Compiled from source, minimizing packages for smaller image size and reduced vulnerabilities.

CJT Enterprises (Growth Opportunity) Boston, Ma | Feb 18'- Dec 21'

DevOps

- Containerized 3-part app on Kubernetes:
 - Front-end (Golang), REST API (Java), Postgres DB.
- Optimized container images using multi-stage, Ambassador pattern.
- Managed CI/CD tools in Docker on Kubernetes clusters.
- Streamlined Dockerfile creation and optimization.
- Effectively troubleshooted containers.
- Automated installations and configurations with Ansible.

System Administration:

- Managed SSL certificates for Kubernetes-deployed apps.
- Proficient in configuring and troubleshooting Linux (Ubuntu, CentOS, Arch) production environments.

United States Air Force East Granby, CT | Aerospace and Propulsion Technician | May 09' – Aug 12'

- (TF34 and F100 series Jet Engines)

State Street Corporation Boston, MA | Talent Development: Programmer and Application Manager
Leadership Development Program (LDP) Application Manager – Assistant Vice President
Feb 15'- Nov 18'

- Transformed legacy corporate program into a centralized portal-based gateway.
- Aligned high-potential cohorts and business COEs through program rotation.
- Ensured a consistent employee experience and promoted diversity.

Wayfair Boston, MA | Talent Acquisition Vendor Onboarding | Nov 18' – Apr 19

- Bridged communication between Beamery and Talent Acquisition.
- Reported and tracked bugs while improving implementation.
- Identified enhancements and features for Talent Acquisition.

EDUCATION

- Bachelors of Arts from Nichols College, Dudley, MA (December 2007)
- Aerospace and Propulsion Technician (Level 3) from United States Air Force, East Granby, CT (May 2009 - August 2012)
- MIT Professional Education: Cloud & DevOps - Continuous Transformation
- Ardan Labs:
- Ultimate Golang
- Intensive Docker
- Intensive Kubernetes
